Guam Resident Makes 12,000-Mile Journey to Health

Don’t Neglect Those Physician Conversations (Even When It’s Embarrassing)

Woman with Zero Symptoms Discovers the Value of Breast Imaging
Exciting News at PIH Health Downey Hospital

NEW EMERGENCY DEPARTMENT LOBBY AND WAITING ROOM OPEN

The Emergency Department (ED) at PIH Health Downey Hospital has opened its doors to a new waiting room and lobby. The new space is more than three times larger than the former waiting room with a drop off area for patients at the front entrance, two new triage rooms for rapid patient evaluation, three new treatment rooms and a nursing station. The spacious waiting area offers a warm and open environment for patients and visitors. The former ED entrance and waiting room will be closed for construction as a new computed tomography (CT) scanner is installed.
12,000-MILES TO HEALTH

After facing two life-threatening health issues in his early 40s, Guam resident Christopher Blas knows the value of expert cardiovascular care—but he had to travel a long way to get it.

Christopher’s journey began when he experienced chest pain and went to his community hospital in Guam, a U.S. Territory located 6,000 miles away from Los Angeles in the Western Pacific Ocean. A CT scan revealed an aneurysm that caused a 3-centimeter dissection (tear) in his aorta, the major blood vessel carrying blood from the heart to the body.

Christopher needed a thoracic endovascular aneurysm repair (TEVAR), but the surgery was too advanced for a hospital facility in Guam. Thanks to the International Patient Services Program at PIH Health, Christopher was able to have the repair done at PIH Health Good Samaritan Hospital. He was flown 15 hours by air ambulance to Los Angeles where Guy Mayeda MD, interventional cardiologist, and Ali Gheissari MD, cardiothoracic surgeon, performed the life-saving surgery.

“Acute aortic dissection is a rare, but very lethal cardiovascular condition responsible for about 13,000 deaths per year in the U.S. Twenty percent of patients with an acute aortic dissection die before reaching the hospital and 50% of patients die if not treated within 24 hours,” said Dr. Mayeda.

Two years later during a follow-up appointment in Guam, a CT scan showed a troubling development—a thoracic graft endoleak at the site of the original dissection.

“An endoleak is a complication that affects about 15 to 25% of patients who undergo TEVAR,” explained Dr. Gheissari. “It means that some amount of blood is still flowing around the graft into the aneurysm cavity.”

Christopher returned to Los Angeles for a second round of treatment. The repair was a success. Today, Christopher is back to his favorite hobbies of driving off-road vehicles and mountain biking.

PIH Health Good Samaritan Hospital has been Guam’s off-island healthcare partner since 1986. Hundreds of patients travel from overseas each year to seek advanced treatment from experienced physicians.

“I traveled to PIH Health Good Samaritan Hospital because I knew I would receive excellent care,” said Christopher. “I had full confidence in the doctors and their expertise. They truly saved my life—not once, but twice.”

DON’T NEGLECT THOSE PHYSICIAN CONVERSATIONS (EVEN WHEN IT’S EMBARRASSING)

How One Patient Finally Solved a Pesky Unexplained Issue

Sometimes, talking to your doctor about a problem can be uncomfortable, if not downright embarrassing. That was certainly the case for Michele, a 39-year-old wife and mother of two, who experienced an unexplained vaginal discharge that occurred on-and-off for years, but simply never went away.
Several physicians told Michele that occasional vaginal discharge is normal, so she didn’t worry too much—until it got worse.

After having a hysterectomy to remove a mass on her ovaries, Michele was referred by Samuel Im MD, PIH Health oncologist, to another doctor, Armen Gregorian MD, PIH Health colorectal surgeon, to investigate further. Dr. Gregorian concluded that Michele had developed a rectovaginal fistula—an abnormal connection between the large intestine (rectum) and the vagina, enabling bowel contents to leak through.

“Rectovaginal fistulas can result from a variety of things—like injury during childbirth, an inflammatory bowel disease like Crohn’s disease, or radiation treatment in the pelvic area,” explained Dr. Gregorian. “Whatever the cause, the condition can cause emotional and physical discomfort, which can impact self-esteem and intimacy. Some rectovaginal fistulas may close on their own, but most need surgical repair.”

Over the course of six months, Michele had two surgeries to repair the fistula. The first involved rectovaginal surgery to remove the fistula and close the tear, plus ileostomy (a procedure that enables waste to leave the body through a surgically created hole called a stoma), giving the area time to heal. Six months later, Michele had a second surgery to remove the ileostomy.

“Dr. Gregorian was so awesome, and he did a great job with my complicated case,” said Michele. “After years of struggling with this issue, I’m finally back to living a normal life. No discharge at all, and I’m back to doing what I love—swimming, living an active lifestyle, and taking fun vacations with my husband and family.”

INTRODUCING PIH HEALTH AT HOME: A NEW SERVICE FOR THE COMMUNITY

Home Care Option Offers a Wide Variety of Non-Medical Services

PIH Health at Home provided by 24 Hour Home Care® is a new customized service that provides affordable non-medical home care to individuals needing companionship or assistance with activities of daily living in order to stay independent in their own home.
PIH Health at Home can be customized to include:

- **Personal care**: help with hygiene, using the restroom or navigating a home environment
- **Medication reminders**: reminders and monitoring for negative side effects or complications from medications
- **Meal preparation**: grocery shopping assistance, general kitchen safety, cooking and cleaning
- **Respite care**: allows scheduled breaks for family and primary caregivers
- **Companionship**: socialization and engagement in thoughtful and meaningful interactions
- **Transportation**: partnership with RideWith24™ for on-demand rides at any time of day without the use of a smart phone or app

PIH Health at Home caregivers can be available for up to 24 hours a day, seven days a week with an out-of-pocket charge. This allows individuals to retain their independence at home without relying on costly residential homes or assisted living facilities. “We’re so fortunate to offer this service to our community. Often times a person just needs a little bit of human interaction and assistance to prevent an unnecessary hospitalization,” says Shelly Necke, PIH Health vice president of Post-Acute Care Services.

Choosing a home caregiver for yourself or a loved one is an important decision that requires attention. That’s why the hiring process for PIH Health at Home is unique and selective, and each caregiver undergoes a thorough and extensive background check as well as specialized training. To facilitate the best caregiver match, a consultation held early in the decision-making process helps ensure the highest level of compatibility.

To learn more about PIH Health at Home, please call 562.742.3348 or visit PIHHealth.org/HomeHealth.

**MAKING TOMORROW’S MEDICINE TODAY**

**ARE YOU INTERESTED IN A CLINICAL TRIAL?**

People participate in clinical trials for many reasons. Healthy volunteers often join clinical trials to help others and contribute to moving science forward. People with an illness or disease participate for the possibility of receiving the newest and best drugs, treatment options and patient therapies—long before they become available to the public. Many want to play a more active role in their own healthcare, under the close supervision of doctors and researchers.

“Clinical trials offer hope for many people, and an opportunity to help researchers find better treatments for current and future generations,” said Jennifer Yanovski, PIH Health director of research. “I’m excited to add to the number of clinical trials available to our community this year—and I hope many people will consider participating.”

PIH Health currently has more than 70 clinical trials in various stages in oncology, stroke, cardiovascular, neonatal, peripheral vasculature and other therapeutic areas.

For more information, visit PIHHealth.org/ClinicalTrials. To learn more, speak to your physician or email us at ClinicalTrials@PIHHealth.org.
SWEET SOUND OF SUCCESS
Tennessee Resident Receives Specialized Care to Remove Inner Ear Tumor

When 53-year-old Philip Atteberry woke up with ringing in his ears in late 2019, he initially suspected allergies. But when the ringing didn’t go away and he started developing hearing loss, he went to his primary care physician in Knoxville, Tennessee, who referred him to a local ear, nose and throat (ENT) doctor.
A few weeks later, Philip received a steroid shot, but it didn’t help. The ENT then recommended an MRI, which revealed an acoustic neuroma.

“Acoustic neuroma is a rare noncancerous tumor that grows slowly from an overproduction of Schwann cells that surround nerve fibers,” explained Gregory Lekovic MD PhD, PIH Health neurosurgeon. “As it grows, the tumor presses on the nerves in the inner ear that control balance and hearing.”

Since the acoustic neuroma was discovered in March 2020—right before the COVID-19 lockdown—and since the tumor was benign and slow-growing, Philip decided to hold off on treatment. But as the year went on, his hearing got worse, so he connected with a friend, who was also treated for this rare condition.

In March 2021, Philip had a video consult with Dr. Lekovic, who reviewed his MRI and recommended surgery to remove the tumor.

“If the tumor gets large enough, it can press against the brain stem,” said Dr. Lekovic. “This can affect neurological function or even become life-threatening.”

Philip decided to proceed with surgery in May 2021 at PIH Health Good Samaritan Hospital with Dr. Lekovic and Kevin Peng MD, PIH Health otolaryngologist. Not only was the surgery a success, Philip recovered quickly enough to enjoy a trip with his wife exploring California sights in July—a trip that was previously postponed due to the pandemic.

“Today I’m feeling great,” said Philip. “I feel very blessed to have had a fantastic surgeon, a wonderful team of physicians, and incredible nurses.”

For more information on ear, nose and throat services, please visit PIHHealth.org/ENT. For more information on neurology services, please visit PIHHealth.org/Neuroscience.

Q: What glucose numbers indicate type 2 diabetes?

A. There are several ways to diagnose type 2 diabetes, which is the most common form of diabetes. Having type 2 diabetes means your body doesn’t use insulin properly. The condition is usually diagnosed using the glycated hemoglobin (A1C) test—a blood test that indicates your average blood sugar level for the past two to three months. Having glycated hemoglobin below 5.7% is normal; 5.7% to 6.4% is diagnosed as prediabetes; and 6.5% or higher on two separate tests indicates diabetes.

If the A1C test isn’t available, or if you have certain conditions that interfere with an A1C test, your doctor may use a different test to diagnose diabetes, such as random blood sugar blood test (taken after fasting) or an oral glucose tolerance test (taken after fasting and drinking a sugary liquid at the doctor’s office).

For more information, visit PIHHealth.org/Endo.

The PIH Health Legacy Society honors those special friends of PIH Health who have made provisions in their wills or estate plans to support the future of healthcare provided throughout all of PIH Health’s entities. It is the legacy gift that is often motivated by a vision for a better tomorrow. We are grateful to so many friends who, through thoughtful planning, have made plans in their estates to support their charitable interests beyond their lifetimes. On behalf of future generations, we say thank you.

TURNING LOVE OF HORSES INTO A GIFT TOWARDS HEALTH

Former Horse Rancher Donates Business Proceeds to PIH Health Foundation

In 1984, Lurene Ross bought a crumbling horse property in Whittier and over time, built it up to become one of the most beloved and iconic horse riding stables and boarding facilities in the Whittier community—L Bar S Ranch.

For 36 years, Lurene happily ran the ranch with her daughter and co-owner, Lori—operating out of the property’s red barn, a historic landmark originally built in 1890. When Lori got married, she and her husband built a home on the property, adding to Lurene’s love of the ranch.

So when Lurene, 81, decided to retire two years ago, relocate and sell the ranch, it was a sad day indeed. But there was a silver lining. The proceeds from the sale enabled her to make significant donations to some of her favorite causes, including PIH Health Foundation.

“PIH Health Whittier Hospital had been my regular hospital for all the decades I lived in Whittier and it provided excellent care through several significant life events,” she said. “It provided care years ago when my young husband had non-Hodgkin lymphoma—I spent a lot of time there during his illness—and more recently, when I was diagnosed with breast cancer in 2015. Thanks to the 3D mammography machines, my cancerous spot was found very early, and a successful lumpectomy was performed right away. It’s been seven years, and I’m still cancer-free. I couldn’t be more grateful for the entire team and great people at PIH Health.”

Today, Lurene lives in Bear Valley Springs, a mountain community near Tehachapi, Calif. Her love of horses continues—she has six horses living on her 2-acre lot. She’s thrilled that her donation will benefit PIH Health and the Whittier community which she will always hold dear.

“PIH Health has always been one of my favorite places,” she said. “The people there were always so nice—it’s something that I’ll never forget.”

Until two years ago, Randy Hew was one of the most active guys you could meet. He worked out at least five times a week, was a competitive runner for more than 30 years, an avid mountain hiker, and played almost every sport there is.

So when he started having sharp pain in his thigh when exercising, which progressed to lower back pain that forced him to stop running, he was truly dumbfounded.

X-rays on Randy’s hip showed moderate osteoarthritis and bone spurs, and the lower back revealed nothing remarkable. He did six months of physical therapy and daily stretching exercises with no improvement, and tried chiropractic and acupuncture with no relief. By October 2020 the pain was so intense he had to stop all activities. Sandra Madrid MD, PIH Health primary care physician referred Randy to see an orthopedic specialist.

In November, Andrew Hsiao MD, PIH Health orthopedic specialist, ordered an updated set of X-rays, now revealing severe osteoarthritis in his hip joint. Randy tried a cortisone injection, which generally provides relief for up to six months, but lasted only 14 days for him. In December, Dr. Hsiao concluded that Randy needed a total hip replacement and referred him to Andrew Luu MD, PIH Health orthopedic surgeon, who specializes in anterior joint replacement surgery.

“Randy was a great candidate for anterior hip replacement surgery,” said Dr. Luu. “It has several advantages over traditional hip replacement, including less pain, faster recovery, a shorter hospital stay, but most importantly, allows someone as active as him to return to doing the things he enjoys with a lower risk of post-surgical hip dislocation.”

Randy’s surgery happened in March 2021, and today he’s pain-free and happy to be back to his daily exercises.

“From my first consultations with both orthopedists to the actual surgery and recovery, I was truly impressed with the entire staff at PIH Health,” said Randy. “Their level of planning, organization and professionalism always made me feel that I was in great hands—my treatment was the absolute best I could ask for.”

To schedule an appointment with an orthopedic specialist, call 562.789.5461. To learn more about orthopedic surgery and our rapid recovery program, please visit PIHHealth.org/Ortho.
MEDICATION MANAGEMENT HELPS WHITTIER PASTOR MANAGE DIABETES AND WALK AGAIN

Two years ago, Manuel Quispe’s diabetes was out of control—but he didn’t know it. At the time, the 62-year-old Whittier resident was wheelchair-bound due to a foot ulcer and not in the best health.

One day, severe kidney pain sent Manuel to the emergency department at PIH Health Whittier Hospital. He was treated for his pain and it was recommended that he follow up with a PIH Health primary care physician.

Manuel chose Nelson Dalla Tor MD, a family medicine doctor at the PIH Health Washington Medical Office Building. Manuel and Dr. Dalla Tor learned that they had a lot in common. Dr. Dalla Tor’s parents were missionaries in Bolivia where Manuel was a pastor and both Dr. Dalla Tor and Manuel’s daughters went to UCLA.

Dr. Dalla Tor referred Manuel to an endocrinologist to manage his diabetes and to Trina Tran PharmD, PIH Health clinical pharmacist in the Medication Management department. “After reviewing Mr. Quispe’s medications and speaking with him, I realized that he was struggling with a complex insulin regimen,” said Dr. Tran. “Our team assesses patients’ medications to ensure accuracy and appropriateness, and prevent harmful interactions. More importantly, our team supports, develops, and guides patients through complex and comprehensive treatment plans to achieve enhanced health outcomes.”

Within the first couple months of working with PIH Health, Manuel’s health improved significantly. His blood sugar was better controlled and the foot ulcer healed. He avoided an amputation, gained independence and is now enjoying improved quality of life. He no longer needs a wheelchair and can drive again.

“I love how all of the PIH Health doctors worked together to provide the best healthcare possible—I’m so thankful,” said Manuel. “I take less medications and I feel healthier than ever. I’m in the best state of my life.”

For more information about medication management, visit PIHHealth.org/Pharmacy.
If anyone doubts the power of a routine mammogram to save lives, they should talk with Sara Casillas, a 51-year-old Whittier resident and breast cancer survivor.
When Sara had her annual mammogram in early 2019 at the PIH Health Breast Health Center Whittier, she had no indication that anything was wrong. Without detectable lumps or family history of cancer, she wasn’t worried.

When PIH Health radiologist Kimberly Bickell MD informed Sara that her mammogram detected something and wanted to do a biopsy, Sara was surprised. When she received a breast cancer diagnosis—ductal carcinoma in situ (DCIS), stage 0—Sara was truly shocked.

“I didn’t even know there was a stage zero,” she said. “Thankfully, I had many treatment options. After reviewing all of them, I chose to have a double-mastectomy. This may seem aggressive to some based on the type of cancer I had, but it made the most sense to me.”

Sara’s mastectomy was performed by Kenneth Thompson MD, PIH Health surgeon, who worked with John Britto MD, PIH Health plastic surgeon, for Sara’s reconstruction.

“One in eight women will be diagnosed with breast cancer in their lifetime, and if you’re that one woman, getting a yearly mammogram beginning at age 40 is the key to early detection and the best possible outcome,” said James Kuo MD, PIH Health radiologist and co-medical director of the PIH Health Breast Center. “Sara is a great example of how breast imaging is powerful enough to detect cancer at its very early stages.”

Nearly three years later, Sara is deeply grateful for the expert care she received from the PIH Health team and gives a thoughtful reminder to women everywhere.

“Whatever you do, don’t put off your mammogram. A year—or even a month delay—can mean all the difference. Early detection is your best chance of survival. If I had put off my mammogram, I may be telling a very different story today.”

For more information on mammograms or breast health at PIH Health, visit PIHHealth.org/Mammogram or call 562.906.5692.

Q. How are heart attacks different for women than men?

A. Many people don’t realize that heart attacks often affect women differently than men. First, heart attacks tend to be deadlier in women. This may happen because women are generally older than men when they suffer from heart attacks. Women also tend to think their symptoms are not those of a heart attack so they don’t seek immediate care. For many women, a heart attack may feel like a strange discomfort in the back (or other subtle signs that are easy to ignore) instead of crushing chest pain. Lastly, women typically don’t respond as well as men to the treatments usually prescribed during or after a heart attack. It takes expert medical care to address these issues specific to women.

For more information on our heart services visit PIHHealth.org/HeartCare.
INVESTING IN A “HEART SMART” COMMUNITY

PIH Health’s Commitment to Cardiovascular Health

Given the heart’s never-ending workload, it’s a wonder it performs so well, for so long, for so many people. But it can also fail—brought down by lack of exercise, a poor diet, smoking, genetics, and more. These sobering statistics from the American Heart Association are enough to give anyone concern:

- Heart disease remains the number one cause of death in the U.S. (based on 2018 data); claiming more lives each year than all forms of cancer and chronic lower respiratory disease combined.
- Approximately every 39 seconds, an American will have a heart attack.

To encourage heart-healthy habits at a young age, PIH Health is investing in prevention through a collaboration with the American Heart Association.
PIH Health is working hard to improve these national statistics—starting here in our own community. Recently, we’ve made significant investments in heart health by acquiring the nationally recognized Los Angeles Cardiology Associates medical group, and through our comprehensive Heart and Vascular Center, which includes screening and diagnosis, specialty care for heart attacks, irregular heart rhythms, heart surgery, interventional cardiology and more.

“Although many people develop some form of cardiovascular disease as they get older, it’s not inevitable,” said Gerald Beckham MD, cardiologist at PIH Health Whittier Hospital. “A healthy lifestyle, especially when started young, goes a long way toward preventing heart disease. But if heart damage does occur, our expert PIH Health team is always here to offer specialized, compassionate care.”

To encourage heart-healthy habits at a young age, PIH Health is also investing in prevention through a collaboration with the American Heart Association, which will provide three local elementary schools with physical and nutrition education, plus playground equipment that promotes exercise and active play.

“The early years play a vital role in the development of healthy behaviors that can carry into adolescence and adulthood,” said Sang-Mi Oh, senior vice president/executive director, American Heart Association Los Angeles. “Collaborations with organizations like PIH Health are important to making a lasting impact and building a foundation of health and wellbeing where our kids spend most of their day.”

To learn more about PIH Health’s heart health services, visit PIHHealth.org/HeartCare.

NEW LOS ANGELES COMMUNITY PARTNERS

This past year, PIH Health expanded its committee of community stakeholders to include partners serving PIH Health Good Samaritan Hospital’s service area in Los Angeles, including the Koreatown Youth and Community Center, the Office of Los Angeles County Supervisor Hilda Solis, and the Los Angeles Centers for Alcohol and Drug Abuse.

We have supported several local events with our new partners, including vaccination events and a regional food distribution. Also, a new shared space for healthcare workers and the community was built at CultivaLA’s Westlake Community Garden (adjacent to PIH Health Good Samaritan Hospital).

“This space is exactly what we needed to continue healing after the pandemic—a place that builds connections in our community, while promoting health and wellness, nutrition, exercise and education. We look forward to what we can do together.” said Jose Miguel Ruiz, executive director, CultivaLA.

To learn more about PIH Health’s commitment to the community, visit PIHHealth.org/CommunityBenefit.
JUST FOR MEN

UroLift® Procedure Brings Welcome Relief for Prostate Gland Enlargement

As men get older, many experience a common condition called benign prostatic hyperplasia (BPH)—also known as prostate gland enlargement.

Because the prostate is located beneath the bladder, when it enlarges it can block urine flow. This can cause uncomfortable urinary problems, such as the urgent need to urinate, a weak urinary stream, inability to completely empty the bladder, and in some cases, kidney infection and bladder stones.

“While this type of prostate enlargement isn’t thought to be a precursor to prostate cancer, many men find the symptoms bothersome and seek treatment,” explains Gerald Yoon MD, PIH Health urologist.

Treatments include medications that relax the bladder or shrink the prostate, surgery, and minimally invasive approaches, like UroLift—a technique that lifts and holds the enlarged prostate tissue out of the way so it no longer blocks the urethra. There’s no cutting, heating or removal of the prostate tissue.

UroLift can be the right choice for men who try and fail with oral BPH medications.

“We perform the UroLift procedure at our Same Day Surgery Center and patients report better urine flow and ability to empty their bladders,” said Dr. Yoon. “UroLift is a great way to get BPH relief without medication or surgery.”

To schedule a consultation with a PIH Health Urology specialist, call 562.907.7600. Learn more at PIHHealth.org/Urology.

Starbucks is Now Open in PIH Health Whittier Hospital Lobby

In the fall of 2021, PIH Health Whittier Hospital welcomed Starbucks. It is located immediately to the left of the main entrance. This is just another way PIH Health is working to improve its patient and visitor experience.
